Steering Wheel

Part No	Description
93850	3 Spoke Steering Wheel 350mm Alloy Cast With 3/4" Morse Taper

Mooring Springer

Part No	Description
93900	Mooring Springer Small: 530mm
93902	Mooring Springer Large: 720mm

Battery Boxes

Part No	Description
---------	-------------

94000	Power Battery Box (PBB32) 325mm (L) x 185mm (W) x 185mm (H)
-------	--

FEATURES :

- Battery condition indicator.
- Accessory socket.
- Circuit breaker.
- External terminal.
- Carry handle.
- Adjustable strap.

94000

94001	Power Pack Battery (DA10W) 330mm (L) x 180mm (W) x 240mm (H)
-------	---

FEATURES :

- Built in charger.
- Charge Cycle LED monitor.
- Battery condition LED monitor.
- Keyed Battery isolator,
- Input / output 12V DC accessory port.
- Tool less terminal connection.
- Protected External terminals.
- Ventilation Fan.

94001

**DESIGNED USING ADVANCED TECHNOLOGY
THE INBUILT SMART CHARGER NOT ONLY
CHARGES BUT CONDITIONS AND PROLONGS
THE LIFE OF YOUR BATTERY**

The POWERPACK comes with a built-in Smart Charger/Conditioner, using the most advanced software program to provide your battery with its best chance of a long life.

The Smart Charger monitors the battery energy level at all times, and can be monitored via the LED condition/charge indicator. To view the battery condition charge level, press and hold down the "press to test" button.

1. CHARGING
Recharges a flat battery - Charges the battery until it reaches 12.5V

2. BULKING
Tops up battery for extra voltage to 13.8V

3. BOOSTING
Peak charge for maximum performance. Maintains the battery voltage at 13.8V for 5 hours to boost battery capacity.

4. RESTING
Allows the battery to consolidate after boosting. Charger ceases charging to allow the battery to rest while allowing voltage to normalize at 12.8V.

5. CONDITIONING
Maintains performance and prolongs battery life. The battery is continuously monitored and the charging current is automatically adjusted to maintain battery voltage at 12.8V for a period of 500 hours.

6. RE-CHARGING
Exceeding the battery and avoiding sulphation build up. After 500 hours, the charger cycle will automatically return to Step 1, maintaining the battery at peak condition.
